BUILDING MATERIALS

new buildings are often made of hard materials like glass, steel and concrete. This of course leads to a bad indoor acoustic environment. Today most architects and designers working with space planning search for new acoustic solutions.

SCHYYY.....SEARCHING FOR SILENCE

We are in a time where human beings are searching for silence, mindfulness and inner well-being. People simply ask for reduced noise in their daily working life in offices, in noisy restaurants, meeting rooms, public spaces and even at home.

Besides...

Our daily life is busy and many people are surrounded by noise from machines and people talking. The noise stress and makes it difficult to communicate with each other.

We need silence...

FAB TRANSFORMS NOISE INTO SOUND
